Backend Software Engineer focused on distributed systems and scalable automation platforms. Designs resilient, event-driven architectures that convert complex business requirements into reliable backend services. Strong in system design, problem solving, performance optimization, and end-to-end ownership.

Experience

Software Engineer 2 - ServiceNow

July 2023 – Present

- Architected and led the development of a distributed **Access Governance platform** to evaluate and enforce high-risk access policies at scale, replacing manual review workflows and eliminating **800+ hours** of recurring operational overhead across audit and compliance stakeholders; post-implementation, achieved **zero control failures** in access management audits.
- Designed and implemented a real-time **Continuous Controls Monitoring (CCM) framework** in ServiceNow, enabling **event-driven** validation of Change, Access, and Incident workflows. **Developed automated control evaluators, remediation pipelines, and monitoring dashboards**, generating **5,000+ automated execution man-hours annually** while improving system reliability and audit traceability.
- Built an **AI-driven self-service analytics platform** leveraging **ServiceNow Build Agent and Fluent APIs**, enabling **prompt-based dashboard generation** and **metadata-aware query construction**. Reduced reporting turnaround from sprint-bound releases to on-demand generation, improving stakeholder velocity and eliminating engineering bottlenecks.

Software Engineering Intern - ServiceNow

May 2022 – July 2022

- Automated **integration testing workflows** on the **Boomi** platform, built **detection systems** for authentication failures, server errors, and payload validation, and implemented **parallel asynchronous execution with automated reporting** to improve test efficiency and reliability.

Projects

Reinforcement Learning Based HPC Scheduler with Runtime Estimation:

2023

- Designed and implemented a **Reinforcement Learning-based HPC job scheduler** integrating **Deep Q-Learning with ML-driven runtime estimation**. Built a code embedding pipeline and Gradient Boosting regression model to **predict job runtimes, improving scheduling efficiency**. Achieved **significant reductions** in wait time and max runtime while increasing overall system utilization compared to heuristic baselines.

Code Vision - VS Code Extension: link

2022

- Developed an accessibility-focused **Visual Studio Code extension** using Node.js and TypeScript to enable visually impaired programmers to navigate and understand codebases efficiently. Implemented a custom file system parser for structured project traversal, Python-specific **semantic analysis** (classes, functions, variables, control flows), and **real-time syntax error detection** to enhance non-visual code comprehension and debugging.

Technologies and Languages

Technologies and Frameworks: React, Node.js, Express.js, SQL, MongoDB, Kafka, Git

ServiceNow: ServiceNow Build Agent, ServiceNow Script, ServiceNow Events, ServiceNow Analytics

Languages: JavaScript, C++, Java, Python, C

Achievements and Leadership

- Secured 265 Rank in ICPC Gwalior-Pune 2020 Regional Round
- Five Star rating on Codechef & Specialist on Codeforces
- Contingent Leader - Inter IIT Tech Meet 10.0
- Head - Digital Wizards (Code Club), IITT
- **Certifications:** Azure Fundamentals, ServiceNow CSA, ServiceNow CAD, ServiceNow Risk and Compliance

Education

- **Indian Institute of Technology Tirupati**, B.Tech in Computer Science – 8.74/10

2019 – 2023
